

A GUIDE TO USING ENDNOTE

Note about browsers:

Depending on your browser settings, the file with your search results will **a)** be downloaded on your computer (double click to open), or **b)** open a pop-up window that will ask you to open/save the file (open with EndNote).

If you are prompted to *Select a Reference Library*, select and open your EndNote library.

Need help? Contact:

- Citations Committee – citations.library@mcgill.ca

Downloading the EndNote Software & Connecting to EndNote Web

Visit <https://libraryguides.mcgill.ca/citation> to download EndNote. [EndNote Online](#), which is accessed and used on the Internet, is also available to the McGill community. Both versions of EndNote can communicate with each other and be used together.

Creating a New EndNote Library

- Under **File** choose **New...**
- EndNote creates a file with a .enl extension and a folder with a .Data extension for your EndNote Library. These two files have to be **together** at all times.
- Cannot save to OneDrive, Google Drive – has to be saved on your computer.

Note:

On a Mac computer, **do not** select the option, "Save as Package" (.enlp) when you are creating a new EndNote library.

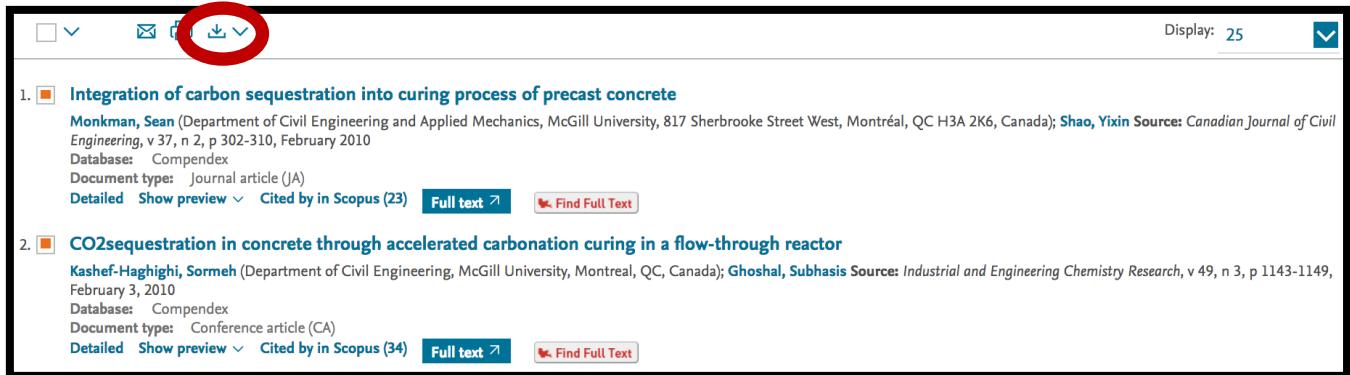

Exporting Search Results from Google Scholar

The screenshot shows the Google Scholar interface. At the top, the search bar contains 'artificial intelligence'. In the top right corner, there are links for 'SIGN IN', 'My profile', and 'My library' (which is circled in red). Below the search bar, it says 'Articles' and 'About 17,300 results (0.10 sec)'. The first search result is titled '[HTML] Catalyzing next-generation artificial intelligence through neuroai'. Below the title, there are links for 'Save' and 'Cite' (both circled in red), followed by 'Cited by 30', 'Related articles', and 'All 14 versions'. To the right of the result, there is a link for '[HTML] nature.com Full View'.

- Click on **Cite** located underneath each search result.
- To import multiple references, click on **Save** underneath the reference you want to add, then click on **My library** in the top-right corner. Select all the references you want to add, then click on the **Export** button. Make sure you are logged in to your Google account.

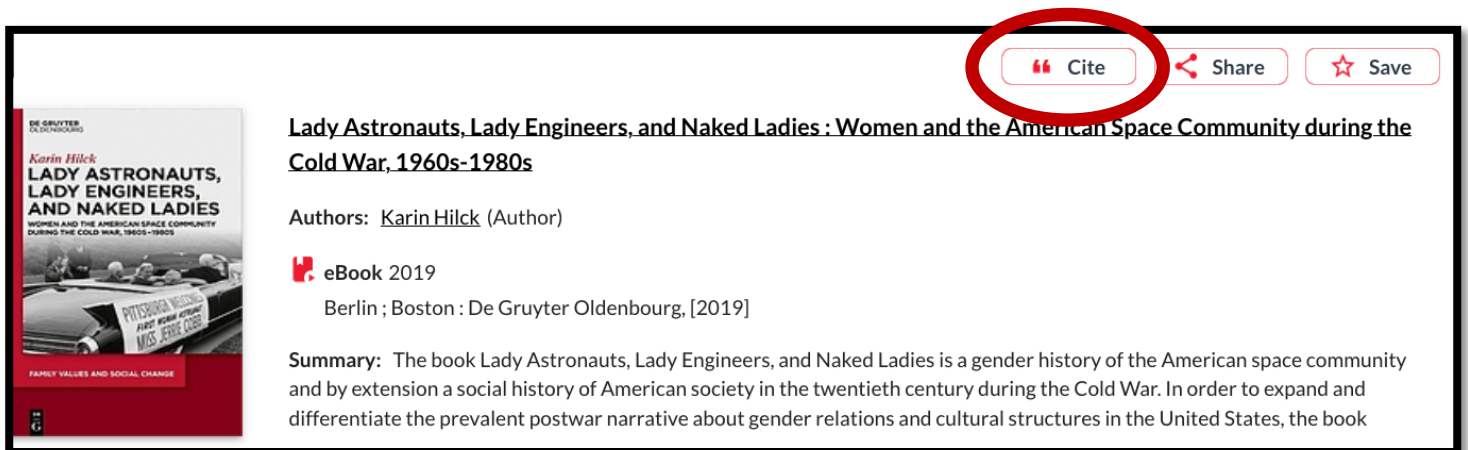

Exporting Search Results from *Compendex*

1. Select results and choose the icon to download records (down arrow).
2. Change the format to **EndNote (or RIS)**.
3. Download record(s).

Exporting Search Results from *McGill Library WorldCat Discovery*

1. Search the *Sofia* catalogue from the Library's homepage www.mcgill.ca/library.
2. Import a reference by clicking on the **Cite** option.
3. Click on **Export to Endnote**.

Manually Entering a Reference

1. Select **References > New Reference** from the EndNote menu.
2. Select the **Reference Type** from the drop-down menu at the top of the form.

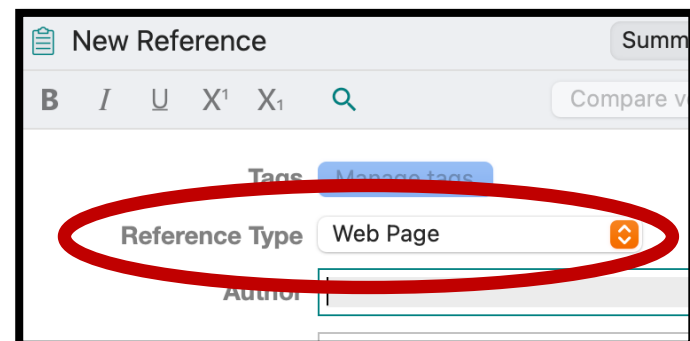

You can enter an author's name as follows:

John Smith *or* Smith, John

Place a comma after the name of an organization:

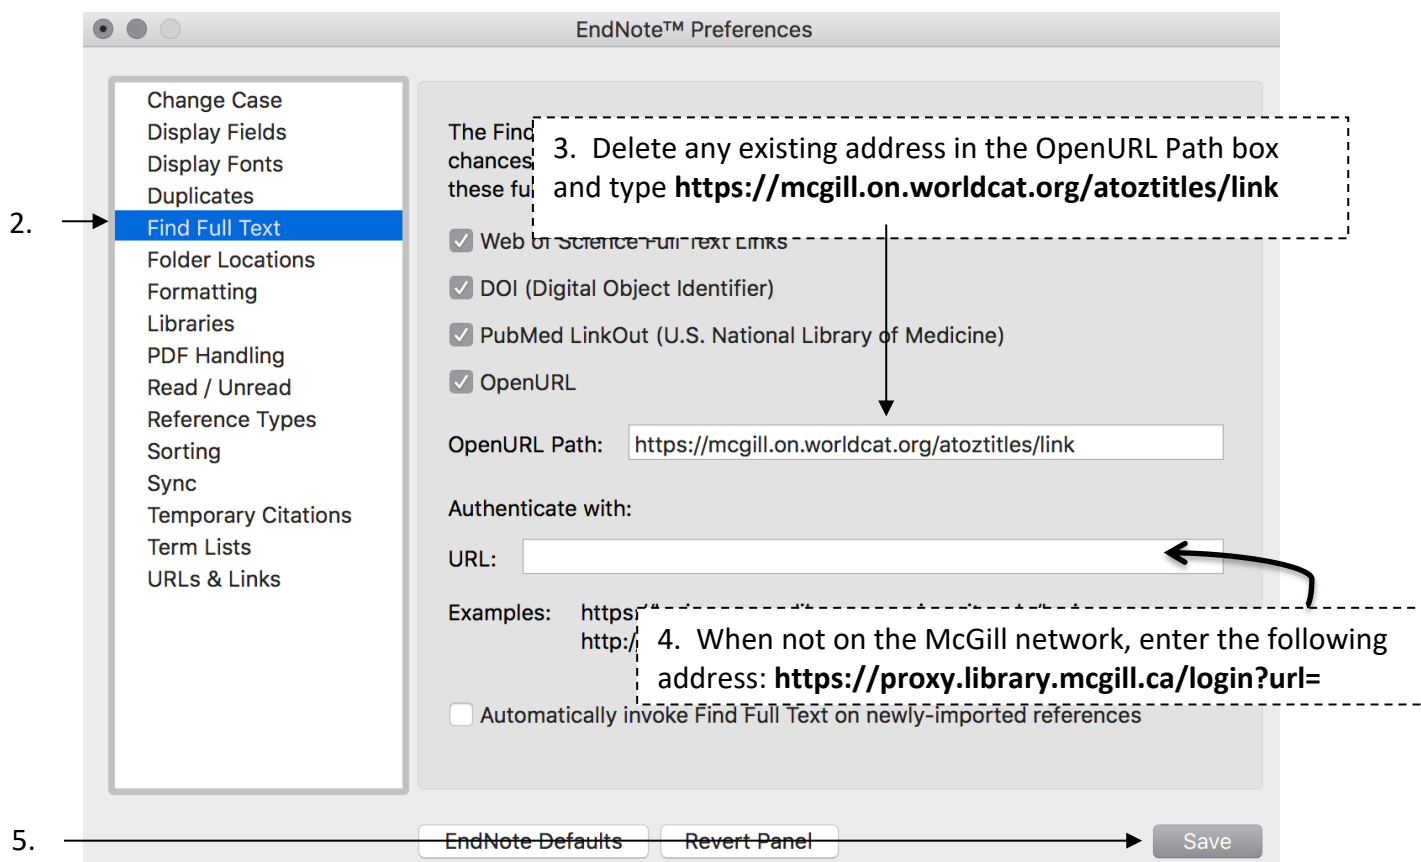

McGill University,

Enter one author per line.

Locating the Complete Text of Journal Articles

1. On a Windows computer, select **Edit > Preferences**. On a Mac, select **EndNote 21 > Preferences...**
2. Select "Find Full Text" and enter the following URLs:

Start with the **find full text** option

- Click on reference(s) of interest.
- Under **References** choose **Find Full Text** or click on the **magnifying glass on a piece of paper icon**.
- When the authentication page appears, if off-campus, type in your McGill email address and password. Click **OK**. You need to authenticate only once during your session.
- A search will begin. If the full text is found it will be added to the reference and a small paper clip will appear and PDF full text document will be attached.

If a PDF is not found, highlight a reference and select **References > URL** then **OpenURL Link**. This will open a browser window with a link to the full text if available through McGill Library. After you save the article (PDF), see below for instructions on attaching it to the reference.

Attaching PDFs to References

- Double-click on a reference that you want to attach a file to.
- Click **Attach file** under the **Summary** tab.
- When the file is attached, a small paper clip will appear next to the reference.

Selecting a Style

- Select the citation style you want the bibliography to be in from the citation style dropdown menu (hiding at the very bottom of the **Summary** tab) or from **Tools > Output Styles**.
 - Select **References**.
 - Click **References > Copy Formatted Reference**.
-

Using Cite While You Write (CWYW) with Word

Inserting citations in Word

- Search method:
 - Open the library that you will be citing from.
 - Put your cursor where you want to insert the citation in your Word document.
 - Click **Insert Citation** in the EndNote 21 tab in Word.
 - Search for a title or author word and select **Insert**.
- Inserting references already selected in the EndNote Library:
 - Put your cursor where you want to insert the citation in your Word document.
 - Click the arrow to the right of **Insert Citation** in the EndNote 21 tab in Word.
 - Choose **Insert Selected Citation(s)**.
- Inserting references directly from EndNote:
 - Put your cursor where you want to insert the citation in your Word document.
 - Highlight the reference(s) in EndNote.
 - Hit the citation button, or go to the menu: **Tools > Cite While You Write [CWYW] > Insert Selected Citation(s)**

Changing the citation style (e.g., from IEEE to APA 7th)

- Click the drop-down box next to **Style** in the EndNote 21 tab in Word.
- Choose **Select Another Style...**

Edit & Manage Citation(s)

- Important note – Make any changes to your citation using this function. Do not edit, delete or modify within the citation and/or bibliography entry itself (anything that gets greyed when you click on it). The changes are not permanent, and CWYW will revert back to what you have in EndNote.

Converting citations to plain text for final submission

- In the EndNote 21 tab in Word:
 - Mac – **Tools > Convert to Plain Text**.
 - PC – **Convert Citations and Bibliography > Convert to Plain Text**.
- Why? EndNote and Word are connected, and EndNote will automatically fix, scan, and update your citations.
 - If you want to break the link between EndNote and Word, you can do that. This will turn all of your citations in Word into plain text. This will stop any of your citations from being updated by EndNote.
 - Always save a copy of your document with the EndNote connection intact. It is not possible to undo this step.
